Attendees of the American College of Foot and Ankle Surgeons Annual Scientific Conference will be able to:

**Understand deformities of the foot and ankle that cause gait abnormalities and pain.** The panel of experts will review clinical diagnosis and the surgical management of the pediatric and the adult flatfoot and cavus foot. Operative interventions will be discussed including procedure selection and description of the accepted techniques. Pitfalls and complications of deformity correction will be discussed.

**Appreciate the medical conditions leading to pathology in the foot and ankle.** The attendee will appreciate the underlying systemic diseases that affect planning and outcomes of surgical intervention. The attendee will identify common manifestations of systemic diseases in the lower extremity as well as understand how to prevent the complications related to these systemic diseases.

**Evaluate and Treat.** The attendee will become familiar with the clinical criteria used to evaluate and treat forefoot, midfoot, rearfoot and ankle pathologies. Conservative and surgical treatments will be based on evidence-based literature and clinical knowledge provided from expert panels.

**Utilize evidence-based guidelines on reducing operative complications.** Technology and advanced techniques are constantly evolving in foot and ankle surgery. It is imperative to the practitioner to understand these new advanced techniques to help diagnose proper pathology. New technology is constantly evolving, with this technology we can more accurately diagnose these conditions. The practitioner will be able implement these new technologies into their daily practices.

**Treat traumatic injuries of the foot and ankle.** The attendee will recognize the various traumatic injuries and fractures that occur in the foot and ankle. The panel of experts will review triage, diagnostic studies, surgical planning, surgical technique and rehabilitation practices to manage these injuries.

**Understand best practice guidelines and accepted practices.** Based on the clinical experiences of the panel of experts and the conclusions of the medical literature, the attendee will become familiar with optimal management strategies of foot and ankle conditions.

**Recognize pediatric deformities presenting in the foot and ankle.** The attendee will recognize common of pediatric foot and ankle deformities. Clinical diagnosis, proper selection of surgical procedures, and timing and techniques will be emphasized to demonstrate proper management of pediatric foot and ankle pathologies.

**Examine the role of imaging in diagnosing foot and ankle conditions.** The attendee will examine the available imaging studies to effectively evaluate foot and ankle abnormalities and treatment planning. Manage patient cases involving staging principles, positioning, and fluoroscopy methods.

**Develop and refine surgical acumen and skills through lectures and workshops.** Attendees will learn new surgical techniques through hands-on workshops emphasizing tissue handling, use of latest implant, and prevention of complications guided by experts in the field.

**Establish ethical practices.** The attendee will be exposed to common ethical considerations relating to the practice of medicine and understand the multifaceted nature of the doctor-patient relationship. The changing landscape of healthcare with the influence of social media, healthcare policy, and digitalization of medical records will be discussed.
