As a foot and ankle surgeon, we always take your safety and the safety of the office staff very seriously, but especially so during this unprecedented time with the COVID-19 crisis. Please know this office follows the recommended cleaning and disinfecting practices set forth by the Center for Disease Control to keep the office clean. We are also following recommended patient flow/triage protocol to keep everyone safe while in the office.

**Patient Protocol**

Our office is asking COVID screening questions prior to every appointment and then again when you arrive at the office.

- If you’re not feeling well, or think you’ve been exposed, please call our office for care options.
- We’re wearing masks for all our safety and ask that you do, too.
- When coming to the office, we are practicing social distancing in the waiting room and in the patient care areas where it’s possible.
- Patient care schedules are spaced out to help keep patient to patient contact to a minimum.

**TeleHealth Services**

Our office is also seeing patients virtually via a TeleHealth appointment. To make an appointment, contact our office and request a virtual visit.

Things we can see via TeleHealth include, but not limited to:

- Heel and arch pain, general foot pain
- Achilles tendinitis
- Metatarsalgia (pain in the ball of your foot)
- Plantar warts
- Skin rashes and athlete's foot
- Big toe pain
- Arthritis
- Gout

For more information on foot and ankle health, visit FootHealthFacts.org, the patient education website of the American College of Foot and Ankle Surgeons.
